I.		Basis of the repor	·			
1.	With	_	nents of the international application:*			
		the international	application as originally filed.			
	X	the description,	pages 1-43, as originally filed,			
		•	pages, filed with the demand,			
			pages, received on with the letter of			
	X	the claims,	pages , as originally filed,			
			pages , as amended (together with any statement) under Article 19,			
			pages , filed with the demand,			
			pages 44-47, received on 8 September 2004 with the letter of 7 September 2004			
	X	the drawings,	pages 1-10, as originally filed,			
			pages, filed with the demand,			
			pages, received on with the letter of			
	X	the sequence listi	ing part of the description:			
	•	•	pages 1-145, as originally filed			
			pages , filed with the demand			
		•	pages, received on with the letter of			
2.	which	n regard to the language, all the elements marked above were available or furnished to this Authority in the language in the he international application was filed, unless otherwise indicated under this item. See elements were available or furnished to this Authority in the following language which is:  the language of a translation furnished for the purposes of international search (under Rule 23.1(b)).				
		the language of publication of the international application (under Rule 48.3(b)).				
		the language of the and/or 55.3).	he translation furnished for the purposes of international preliminary examination (under Rules 55.2			
3.	With	regard to any nucl	leotide and/or amino acid sequence disclosed in the international application, the international tion was carried out on the basis of the sequence listing:			
	X		international application in written form.			
		filed together wit	h the international application in computer readable form.			
		furnished subsequ	uently to this Authority in written form.			
		furnished subsequ	uently to this Authority in computer readable form.			
		The statement that international appl	The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the nternational application as filed has been furnished.			
		The statement that been furnished	at the information recorded in computer readable form is identical to the written sequence listing has			
4.		The amendments	have resulted in the cancellation of:			
		the descr	ription, pages			
		the clain	ns, Nos.			
		the draw	rings, sheets/fig.			
5.		This report has be go beyond the dis	een established as if (some of) the amendments had not been made, since they have been considered to sclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).**			
*	Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17).					
**			containing such amendments must be referred to under item I and annexed to this report

V.	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations
	and explanations supporting such statement

1.	Statement		
	Novelty (N)	Claims 1-36	YES
		Claims	· NO
	Inventive step (IS)	Claims 1-36	YES
		Claims	NO
	Industrial applicability (IA)	Claims 1-36	YES

## 2. Citations and explanations (Rule 70.7)

The following documents identified in the International Search Report have been considered for the purposes of this report:

D1. Bownes, M. et al (2002) Insect Molecular Biology:11(5), 487-96

Claims

D2. Yan, Y-L et al (1990) Developmental Biology: 140, 281-90

## Novelty (N) and Inventive Step (IS)

D1 describes the cloning of the Drosophila yp1 gene into an E.coli expression vector and shows that the yolk protein thus produced is taken up into the ovaries of both Drosophila melanogaster and Anopheles gambiae.

D2 describes the use of recombinant vitellogenin to deliver reporter proteins to oocytes of Drosophila.

Neither D1 nor D2 disclose an expression vector comprising a vitellogenin gene operably linked to a promoter, wherein the promoter is functional in a eukaryotic host that is suitable for use as a feed or feed additive. Neither do these documents disclose the use of recombinant vitellogenin to deliver a therapeutic material into the maternal occytes of an oviparous animal. Thus, claims 1-36 are considered novel and inventive.
